

MONTE SOLANE

VALPOLICELLA RIPASSO

DENOMINAZIONE DI ORIGINE CONTROLLATA

2016

Vigna di Monte Solane

Grape varieties: **Monovarietal Corvina**

Gentile

Soil: **stone lastolare**

Hectares of vineyards: **4.53**

Altitude: **650 m slm**

Exposure: **South**

Age of vines: **20**

Training system: **Espalier**

Planting density: **5,000 plants/ha**

Yield per hectare: **60 q/ha**

Harvest period: **October**

Acquired alcohol: **15.5%**

Total acidity: **5.36 g/l**

Dry extract: **28 g/l**

Residual sugar: **0,6 g/l**

pH: **3.45**

SERVICE: **We recommend uncorking one hour beforehand and pouring into balloon glasses at cellar temperature (15-18° C)**

AGEING POTENTIAL : **15-20 years**

VERAISON
2 August

HARVEST TIME
14 September

The 2015/2016 winter went by with higher than average temperatures in all growing areas with the absence of rainfall except for a brief period of snow. A cold and wet period began at the start of April, with lower than average temperatures, lasting until mid-May. Following months alternated temperatures with values below historical average, in particular during July and August. Rainfall was still high with some days of continuous rain. Summer was characterized by typical thunderstorms, within normal values, and a single hailstorm that struck a small area in the high Valpolicella hillside areas. Fine weather began with the arrival of September when high temperatures and good wind conditions kept air humidity levels low even in the presence of some strong rainfall, permitting a good conclusion of the vegetative cycle. In autumn temperatures continued to be pleasant until the start of December when winter took over the climate.
